 SLICE: Multidisciplinary Acute Care for Stroke victims

▶ Time is brain

▶ Time is workflow

▶ Improving workflow by a synergistic multidisciplinary approach of the patient

Dear friends, dear colleagues,

Join us in France this coming October 2nd to 4th, 2017 at the Hyatt Regency Nice, Palais de la Méditerranée, for the third edition of SLICE - the live course dedicated to stroke!

If you were at the second edition, you already experienced the excitement of being one of 300 multidisciplinary experts who came together and shared their knowledge and clinical expertise. The 2017 edition will build on this successful approach, highlighting new clinical cases, emerging techniques and improved team strategies providing you with the tools and resources you need to change your practice today.

This year at SLICE - for the very first time - Stroke Centers are invited to submit their best recorded cases of stroke treatment. Three teams will be selected to present and share their work with the course participants, both audience and faculty members.

We will also look beyond the latest trials to technical protocols, anesthesia management and the neurological guidelines necessary for effective decision-making during the acute phase. An internationally renowned and uniquely accessible multidisciplinary faculty will offer their own tips and tricks, sharing practical "take home" messages that can improve and optimize your decision-making and workflow - essential elements in stroke care.

Mark your calendars now and be sure to join us in Nice for the third edition of SLICE - which promises to be even more productive and interactive than ever before!

Remember... it is only by working together that we can improve stroke care for all our patients!

Vincent Costalat and Alain Bonafé
Course Directors

This new edition's program will focus on:

- Day 1: Pre-Hospital Management
- Day 2: Acute Stroke Recanalization
- Day 3: Prevention Strategy

Stroke cases will be recorded at the following Stroke Centers:

- UPMC Stroke Institute, Pittsburgh, USA - led by Tudor G. Jovin.
- Rotterdam University Medical Center, Rotterdam, The Netherlands - led by A. van der Lugt (MRCLEAN team).
- University Hospital of Montpellier, Montpellier, France - led by Vincent Costalat.

During the lunch break, there will be 3 workshops available for all participants:

- Stroke treatment on silicon models
- Model simulation of induction and management of blood pressure during general anesthesia
- "Test yourself" at the Race Score and NIHSS
